

Tempo Communications Honored by 2024 Cabling Installation & Maintenance Innovators Awards

VISTA, CA – September 16, 2024 - Tempo® Communications, a leading manufacturer of tools and test equipment for the telecommunication industry, announced today that its Fiber Trainer was recognized among the best by the 2024 Cabling Installation & Maintenance Innovators Awards. An esteemed and experienced panel of judges from the cabling community recognized Tempo Communications as a Platinum honoree.

“On behalf of the Cabling Installation & Maintenance Innovators Awards, I would like to congratulate Tempo Communications on their Platinum level honoree status,” said Cabling Installation & Maintenance Chief Editor Patrick McLaughlin. “This competitive program allows Cabling Installation & Maintenance to celebrate and recognize the most innovative products, projects, technologies, and programs impacting the industry.”

The Fiber Trainer features a suite of loss events designed to replicate real-world scenarios, including faulty connectors, Macrobends, and damaged fiber optic cables. Central to its design is a 1km fiber link, strategically integrated to offer students a typical fiber link with a fault positioned midway. This unique setup empowers technicians to utilize the Optical Time Domain Reflectometer (OTDR), to test and evaluate the 1km link.

The Fiber Trainer is also equipped with two fiber spools, providing ample fiber for fusion splicing exercises. The connectors on the ends of the fiber spools offer convenient connections for loss testing, enabling students to accurately measure and validate fusion splice loss.

The Fiber Trainer stands as a testament to Tempo® Communications' dedication to fostering excellence in telecom technician education, marking a significant milestone in the company's relentless pursuit of innovation and industry leadership.

About Tempo Communications

Tempo Communications, Inc. offers a complete line of reliable, industry-leading test and measurement solutions to address all stages of network deployment, enabling the development, installation, and maintenance of xDSL, Fiber, Cable, Ethernet, and Irrigation networks. The Tempo Communications

North American headquarters remains in Vista, CA, with Global headquarters in Australia and Cwmbran, UK.

About Cabling Installation & Maintenance

For 31 years, Cabling Installation & Maintenance has provided useful, practical information to professionals responsible for the specification, design, installation, and management of structured cabling systems serving enterprise, data center and other environments. These professionals are challenged to stay informed of constantly evolving standards, system-design and installation approaches, product and system capabilities, technologies, as well as applications that rely on high-performance structured cabling systems. Our editors synthesize these complex issues into multiple information products. This portfolio of information products provides concrete detail that improves the efficiency of day-to-day operations and equips cabling professionals with the perspective that enables strategic planning for networks' optimum long-term performance.
